

Create an MSIX Package :

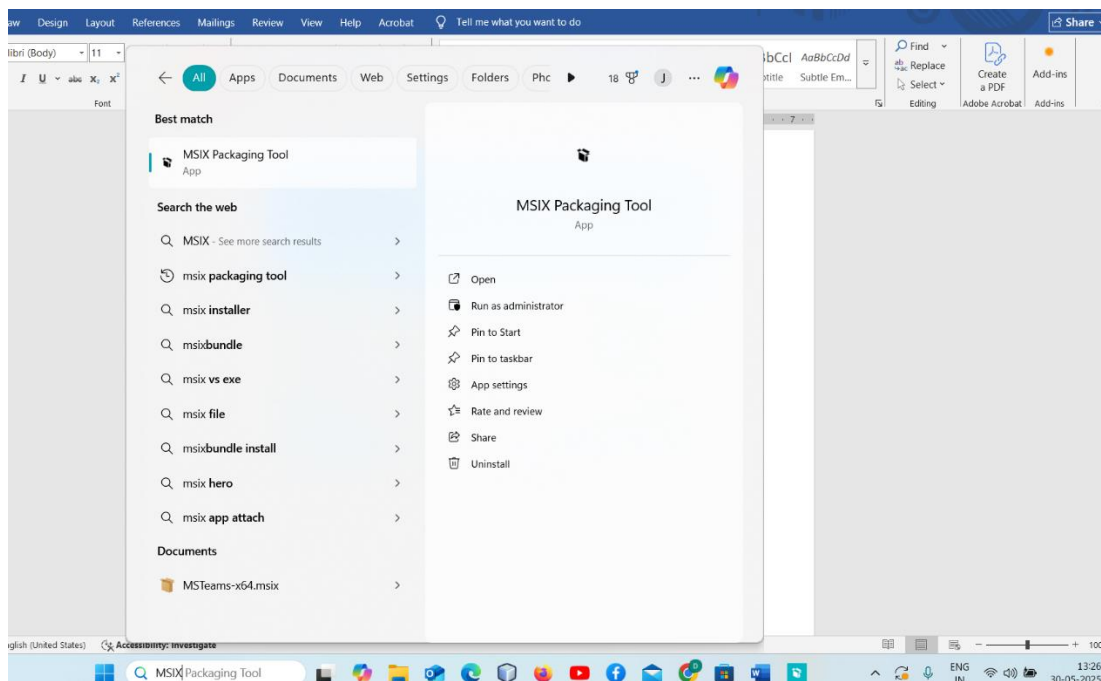

Using the [MSIX Packaging Tool](#) to create an MSIX application package.

Steps :

1. Go Microsoft Store and in search bar search MSIX Packaging Tool and install it .

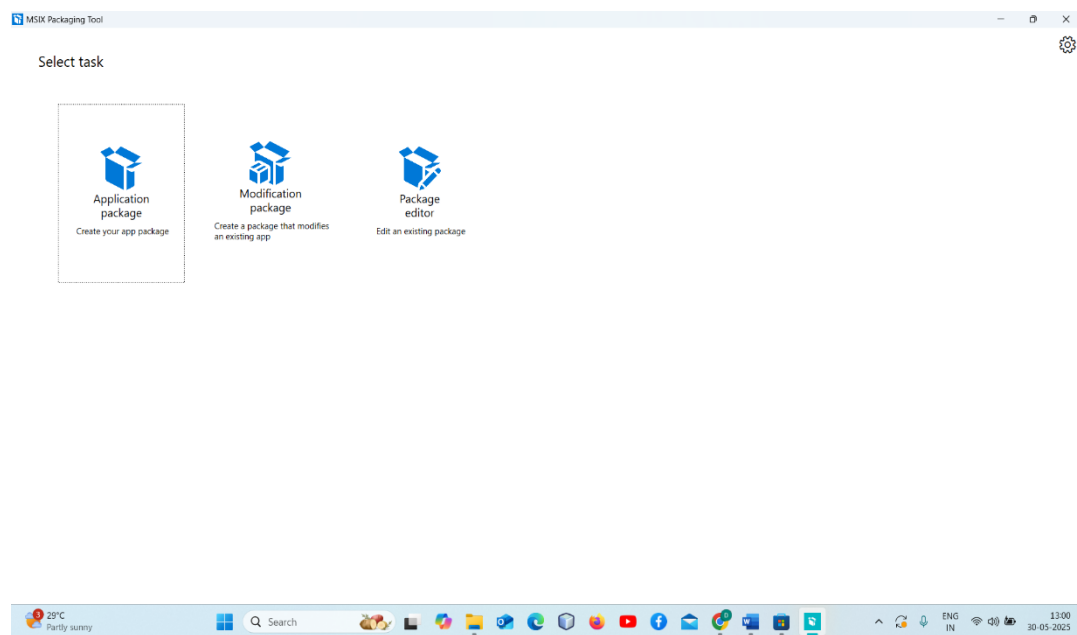

2. After installation completion search MSIX Packaging Tool and open it .

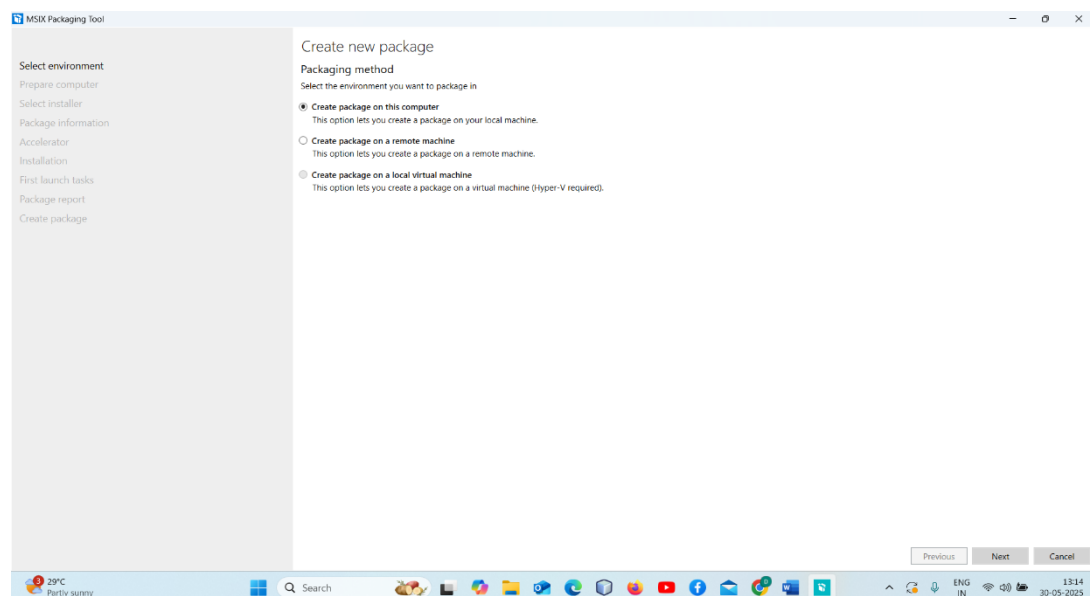

3. After opening the MSIX Packaging tool below page will be pop-up

Packaging Method :

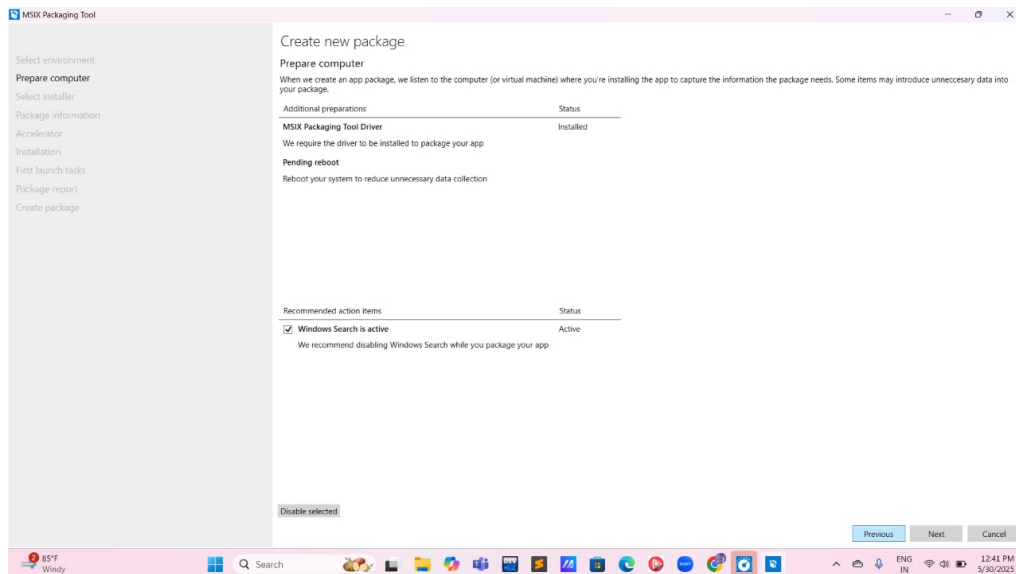

- If you are already working in clean environment click on **Application Packaging**.
- If you want to connect to an existing virtual or remote machine, select **Create package on a remote machine**
- If you have a local virtual machine on your machine you want to convert on, select **Create package on a local virtual machine**
- Here we are selecting **Application Packaging** Option

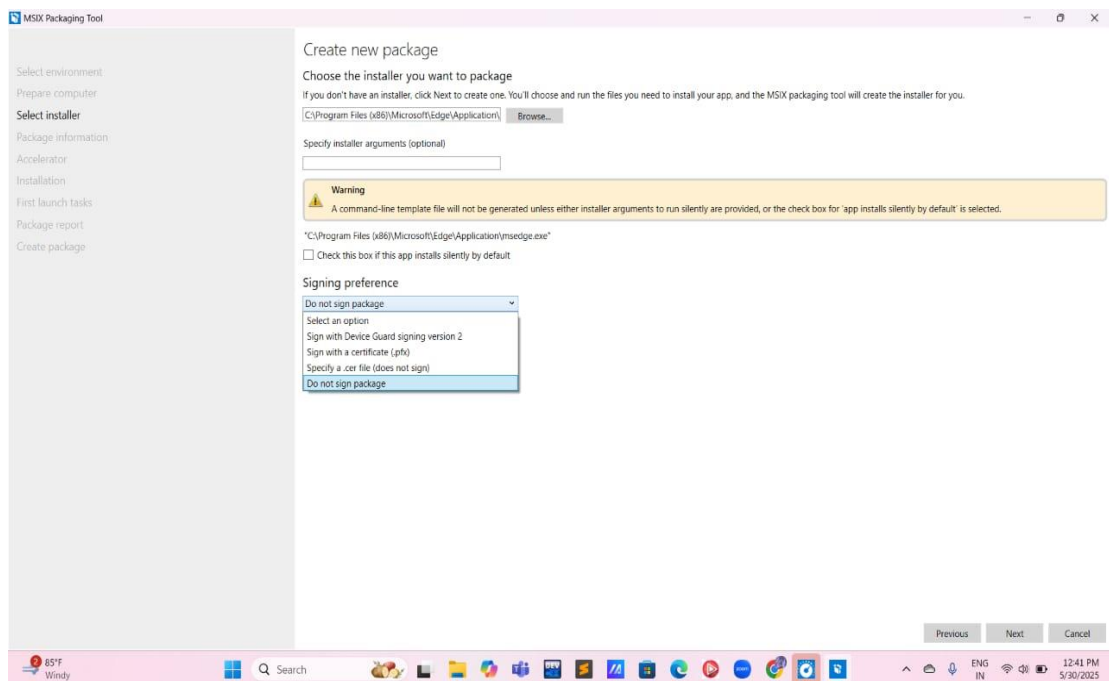

4. Now Enable check box 1 i.e Create Package on this computer and click on Next

5. Enable the Checkbox Window Setup is Active and click on next

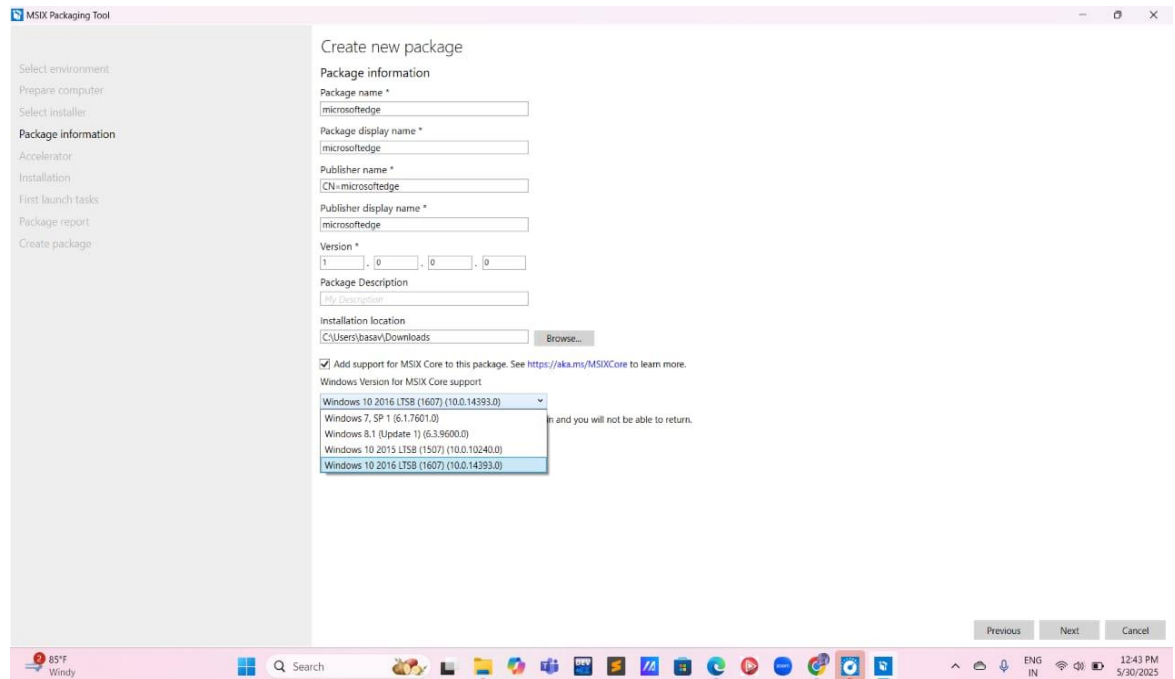

6. Now browse .msi file from your pc and under Signing Option select signing preference ,you can also set this as a default in your settings and click on next

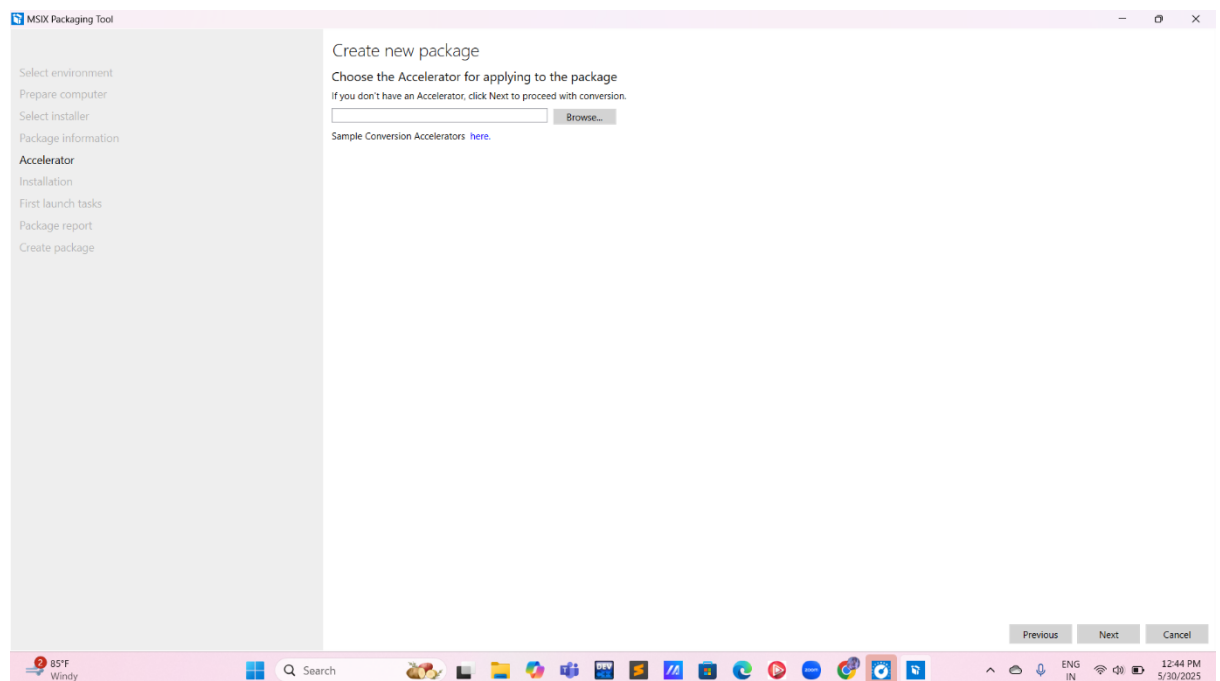

7. Package Information :

- You want to package your application on an existing virtual machine you have to fill the Package Information like package name , description ,version ,installation location and click on Next

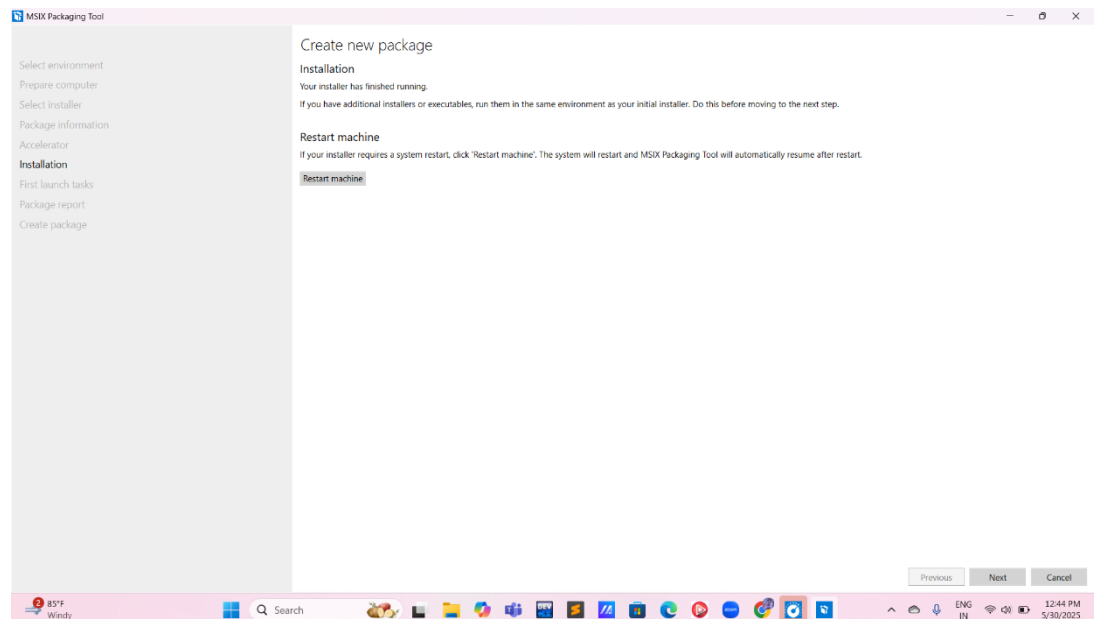

8. Here no need to select anything click on Next .

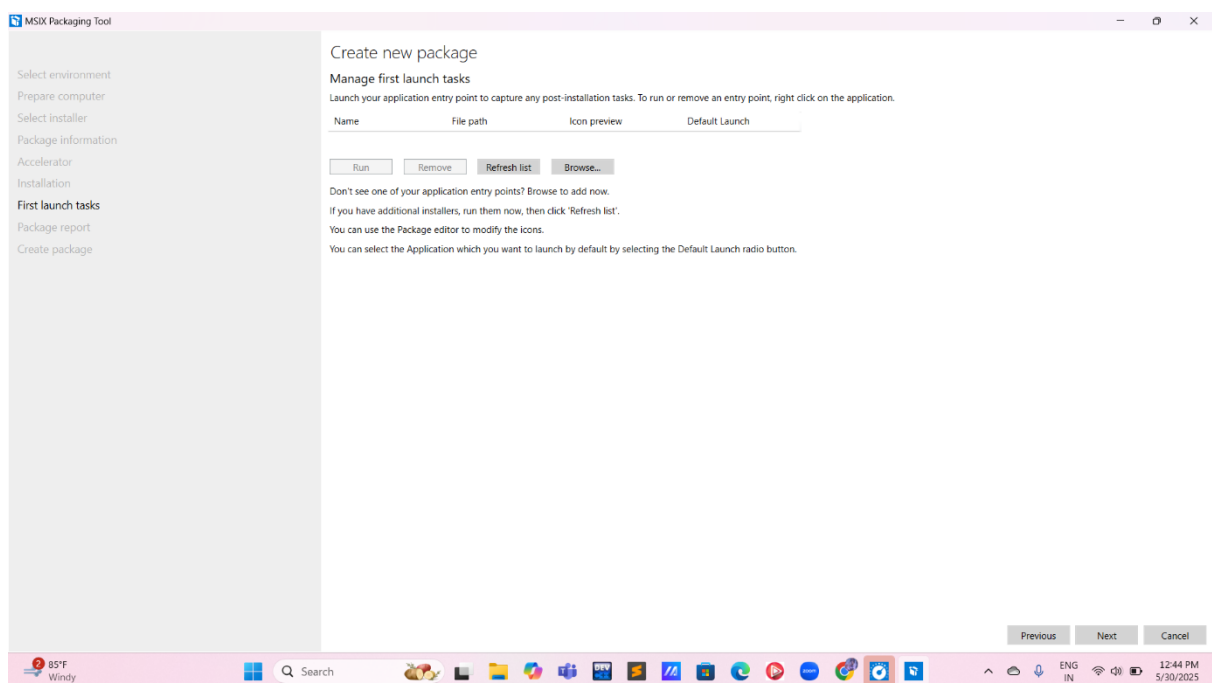

9. Installation – Click on Next

- This is the installation phase where the tool is monitoring and capturing the application install operations.

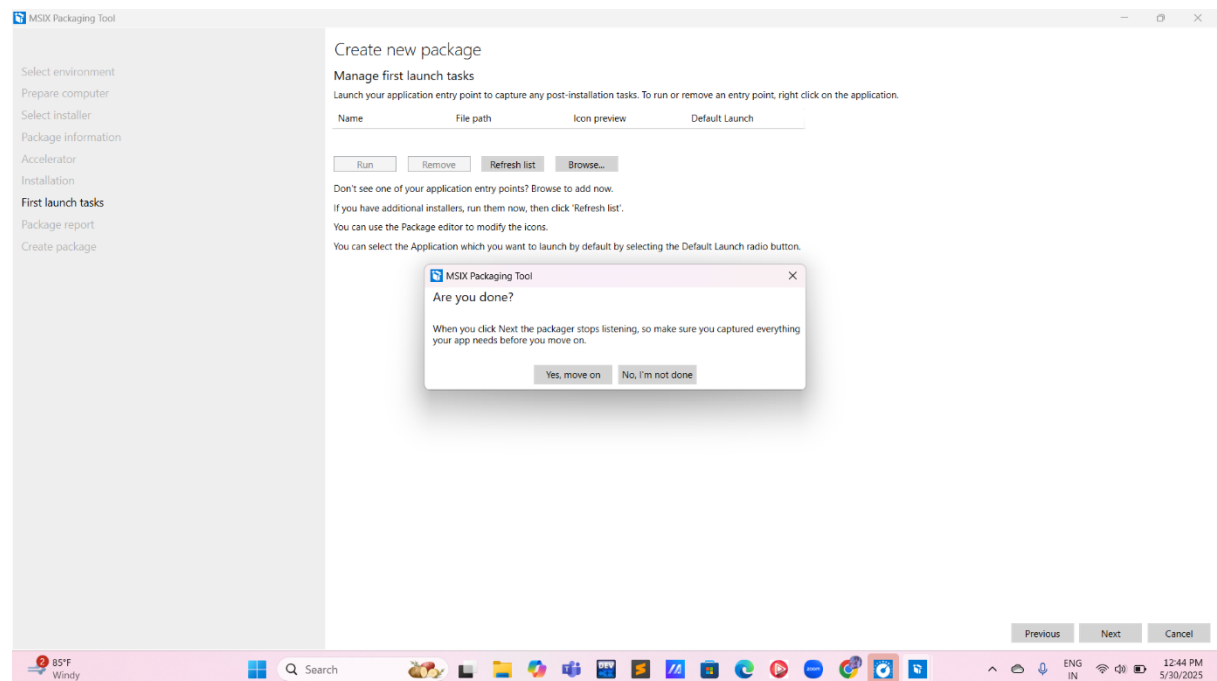

10. Manage first launch tasks :

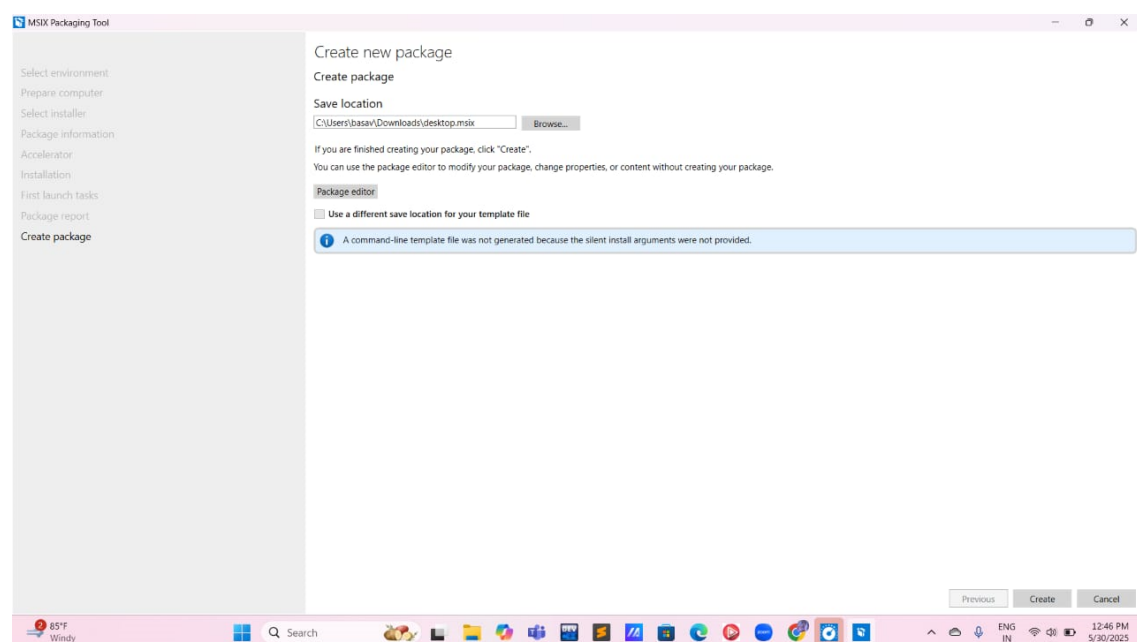

- You can launch the executable by selecting it, and then clicking **run**. You can also remove any unnecessary entry points by selecting it, and then clicking **remove**. Click on Next

11. After clicking this pop-up message will be display that asking for confirmation that you're finished with application installation and managing first launch tasks. Are You Done ? OR No , I am not done Click On Yes , Move On

12. After that here Browse and give location where you want to save package and click on Create.

13. After Clicking on create the package is created successfully and it shows you that Package Successfully Created .
